

STAFFALERter

CONNECTIVITY FOR THE SMART ENTERPRISE

StaffAlerter is designed to leverage communications and mass notifications for security and routine notifications. StaffAlerter provides situational awareness, command and control and group notification services that can expand to meet the needs of any size organization.

Why Are Organizations Choosing StaffAlerter for Their Notification Needs? StaffAlerter Provides The Ability to Detect, Respond To and Alert On Any Event With StaffAlerter, You Can Take Full Control Of Your Facility

StaffAlerter Leverages Communications and Supports Monitoring and Control Functions

- SMS Messaging
- E-Mail
- Phone Message
- Cell Phone Notification
- Emergency Operations Center
- Fixed and Mobile Panic Buttons
- Wi-Fi and Cellular Networks
- Building-wide Alerts via Paging
- Access Control
- Weather Alerts
- Desktop, Audio and Visual Alerts

StaffAlerter is your solution for notification and safety

Hospitality - StaffAlerter, utilizing the SA-Alert and PAD, provides solid protection for hospitality workers in the event of an emergency.

Schools and Government - Utilizing the full array of features, teachers and staff can use the PAD for assistance and emergency events while the SA-Alert can be used for audio/visual alerting for hallways and loud areas. The Emergency Operations Center provides instant meetings for key personnel using video, voice and collaborative document sharing in critical situations. Building-wide paging, phone system integration, access control and monitoring of HVAC and refrigeration systems as well as parent and student notifications for late starts and closures are simple to set up and administer.

Assisted Living- StaffAlerter provides resident notifications, facility monitoring, and safety for staff through the use of Personal Alert Devices (PAD).

Manufacturing - StaffAlerter provides process and production monitoring, access and security control and monitoring

Providing best of breed Emergency Notification Service and Control. StaffAlerter is the only solution you need.

Anyone responsible for keeping groups of employees, customers, students, or parents informed and safe needs the communication power of StaffAlerter. Developed originally for the K-12 market, StaffAlerter leverages the latest in IoT technology, cloud services and communications through its advanced distributed architecture. Operating over both Wi-Fi and cellular networks, StaffAlerter ensures any message for any person or group will be delivered regardless of the facility's power or network status.

STAFFALERTER

TAKE CONTROL OF YOUR FACILITY

What makes StaffAlerter better than the current Emergency Notification Systems? StaffAlerter combines three important functions in one application

Detect: StaffAlerter provides flexible, programmable inputs to collect activity from almost any sensor, relay output, switch or alarm. The user has direct control via the enhanced web interface to take immediate action. Conditions monitored can be direct inputs from Personal Alert Devices (PAD), phone systems or other alarm reporting systems. For monitoring weather, open doors, motion sensors, IT equipment alarms, temperature and humidity monitoring, if you need to detect activity, StaffAlerter has the right input option.

Alert: StaffAlerter, as its name implies, can provide immediate notification via SMS, E-Mail or phone calls to any number of persons or groups. StaffAlerter allows the user to pre-record announcements as well as create and send text to speech messages on the fly in the web portal, or create an ad hoc message and send it with a single call, independent of web access. In addition, PC/mobile device screen alerts, building wide paging, premise audio/visual signals, door access control, remote program execution via E-mail Control software, and activation of other alarm systems and messaging over telephone systems. Schools can control the bell schedule and announcements with StaffAlerter.

Respond: StaffAlerter provides controllable relay outputs to start/stop equipment, activate alarm systems, access control functions, initiate audible alarm and visual signals, reset equipment, and control any device that can be controlled via a relay. Direct control is via web buttons the user creates, making StaffAlerter the most flexible network enabled remote control system available. The distributed architecture of StaffAlerter and Contact Notifier provide support for remote areas across any geographical region with inputs and outputs communicating with each other.
