

StaffAlerter Cloud Services

StaffAlerter Cloud Services - the ultimate solution for companies looking to keep their employees and customers informed in a fast, efficient, and secure way. With StaffAlerter Cloud, you can easily manage, set rules, and send notifications to an unlimited number of devices, users, and groups to meet the unique needs of your organization.

One of the key features of StaffAlerter Cloud is the Signup Portal, which makes it easy to add new staff to the StaffAlerter website. During the signup process, users can verify their email, voice phone number, and SMS text number and select their preferred method of notification. Users can also update their contact information, notification preferences, and deactivate their accounts at any time.

With Cloud Buttons, frequently used notifications can be sent quickly and easily to one or many groups of users from the admin portal or from the cell phone based SA-Inform application, including phone calls with pre-recorded audio messages or text-to-speech generated messages sent with a geographical map indicating the originator's location.

Email Actions allow you to turn emails into phone calls or SMS texts, prompting an immediate response from your staff or customers.

The Verified Inbound Calling feature enables authorized users to call into the dedicated StaffAlerter phone number for your company and hear the last message that was broadcast out. Managers and Supervisors can use the Verified Inbound Messaging feature to send audio messages directly to a group of users after being verified by their caller ID and security pin.

Finally, Recording Mailboxes allows messages from employees, customers, or vendors to be left in a dedicated mailbox, with an email sent to the relevant manager or group containing the message. This feature can be used for employee call off management, sales orders, and work order completion.

In summary, StaffAlerter Cloud offers an all-in-one solution for companies looking to improve communication and collaboration with their employees and customers. With StaffAlerter Cloud, you can quickly and easily send notifications, set rules, and manage an unlimited number of devices, users, and groups - all in a secure and efficient way.
