## Integrated and Affordable Emergency Notification, Detection and Response for Government Offices

StaffAlerter is the right solution for any government facility, providing the ability to manage any number of devices, control any number of systems, and alert key personnel to problems or threats as they arise.

A typical use case for government might include emergency call buttons, connected either wired or wirelessly through the building Wi-Fi network to the StaffAlerter Cloud Server.

Someone pressing these buttons can request security, control devices or doors, and call for help with a simple touch. Portable call buttons, called PAD's (Personal Alerting Devices) can also be employed to handle mobile workers.

Door monitoring, typically applied to those doors not a part of an access control system, can report real - time status, and if the door is propped open, can alert staff. These simple to install, wireless sensors allow any number of entry points to be monitored.

# Integrated Emergency Notification and Response for Government Offices

The need to have reliable systems in place for notifying staff that can be used for all types of scenarios, StaffAlerter provides the ability for government facilities to communicate with their staff over multiple communication channels. Benefits of StaffAlerter when used as a government facilities communication system include:

- **Emergency Call Assistance:** Notifications can be sent to specific groups of users based on their role, location, department, or other criteria. StaffAlerter can be used to send urgent alerts to targeted users in response to events of any nature.

- **Custom Messaging:** Custom messages can be created in StaffAlerter that government offices can use to send pre-programmed alerts and notifications, and optionally, create messages in real time to be disseminated to specific users or groups. This ability can save time in an emergency where targeted specific messaging is required.

- **Multichannel Delivery:** StaffAlerter can deliver notifications via multiple channels, including emails, SMS text, voice calls and push messaging, overhead paging as well as desktops, multi-media message boards in hallways or status boards for security.

- **Detect Door Propping:** To prevent doors being propped open, PropStop notifies users via Text SMS, voice calls, email or push notifications to security providing information on specific doors and status. Customizable time values can be set for each door to define what period the door can be open before the system determines and "propped open" condition exists.

- **Integration with Other Systems:** StaffAlerter can integrate with other notification systems to extend the reach and type of notification beyond the local premises to users virtually anywhere.
- **Equipment Monitoring:** StaffAlerter can connect to existing systems and provide focused alerts to responsible parties. Any device or system that can provide an output or send an email can be integrated into the StaffAlerter system. These include refrigeration, HVAC, monitoring devices to name just a few.

Designed to improve security, safety and provide notifications to staff for immediate action.

- Fixed and portable alerting devices
- Push button activation of alerts to security by departments
- Automatic activation of event-based SMS text messaging, emails and phone messages to responders
- Desktop notifications
- Activation of door lockouts
- Audible and visual alerting systems for police response
- Monitors for ceiling and hallways with custom messaging
- Extension of existing notification systems through integration with StaffAlerter
- Multi-event sensors that are monitored by the StaffAlerter Dashboard to provide instant notification to staff
- Automatic pre-programmed response to alerts
- Integration with overhead paging systems and telephones.

# StaffAlerter Provides Rapid Notification Benefits

Rapid notifications can assist government offices improve communication and coordination among staff members to ensure that critical information is disseminated quickly and efficiently.

- **Security personnel:** Government security staff play an important role in maintaining a safe and secure environment for workers and the public. StaffAlerter can be used to alert them to potential security threats involving persons or events in real time. Events involving court rooms, judge's chambers and public areas such as council chambers and government official's offices can be directed to police and security personnel via silent alarm devices.

- **Emergency response teams:** In the event of an emergency, such as a natural disaster or a mass casualty incident, StaffAlerter can be used to quickly mobilize emergency response teams within a location and coordinate their efforts.

- **Support staff:** Support staff, such as administrative assistants, cleaning staff, maintenance workers, and food service workers are critical to smooth day to day operations. Mass notifications can help ensure that they are aware of any changes or updates to facility policies, procedures, or schedules.

- **Outside areas where there is limited activity can be monitored remotely using the solar powered Wi-Fi  and Cellular based Watchdog system.**

## Instant Status Updates via the StaffAlerter Dashboard Option

# Consider StaffAlerter before Acquiring, Updating or Replacing a Safety System

- Wide ranging capability
- Built on the latest cloud-based technology
- Robust and redundant service
- Broadest range of application features and flexibility
- Highly secure communications
- Ease of deployment
- Reliability

- Lower acquisition and maintenance cost
- No impact to existing infrastructure
- Unlimited scalability without effecting performance
- Ease of programming and provisioning
- Ease of expansion
- Ease of integration

StaffAlerter is the right solution for government facilities.

Call today for a demonstration of StaffAlerter's capabilities over the web. At no charge we can design a system that's right for your facility based on the best practices developed from similar clients.

Maximize your safety spend and make your facility more secure using StaffAlerter cloud-based technology.

Nothing stands in your way of making your facility safer now with StaffAlerter, the best command and control emergency notification and response technology on the market.
