

EVACUATE

 **STAFFALERTER**

Facility-Wide Emergency Notifications and Threat Alerting

Presence Management StaffAlerter Message Control Server operates in high-value manufacturing environments where employee safety, rapid response, and clear communication are critical and provides a unified, facility-wide method to instantly notify production floor personnel during emergency and threat situations.

The Message Control Server provides a solution that can deliver simultaneous audio and visual alerts across the entire facility with single-touch activation, while integrating with existing paging and communications infrastructure.

The Message Control Server is a subset of the StaffAlerter Command & Control Notification Platform, delivering an integrated, wireless, and highly reliable emergency communication system that enables manufacturing facilities to protect employees, improve compliance, and reduce risk.

Typical Use Cases

SA-Message Control Server
Communicates with the StaffAlerter Cloud to extend monitoring, alerting and notification functionality.

All-Call zone paging with strobes:
A single button press or sensor input plays a page announcement while activating lights and sirens on specific relays.

Lockdown and access control:
Trigger door locks, gate relays and site wide announcements in a coordinated sequence.

Timed events:
Scheduled inputs, toggle relays (bells) and optionally play a flexible page announcement.

Machine Status and Alerts:
Monitor contact closure from a wide array of sensors or from machinery; page supervisors and activate a stack light and weather and temperature alerts.

SA-Message Control Server bridges telephony physical control in one reliable local platform. It reduces complexity, speeds response and delivers the operational visibility safety critical sites require without introducing cloud risk or new vendor lock-in.

Outbound Messaging

- Weather
- TEAMS
- Slack
- Discord
- Telesys
- StaffAlerter
- Desktop Messaging App
- HTTPS Inbound/Outbound Events
- Inbound/Outbound Mgmt Trigger/actions
- CAP Messaging

High Value Solution

- **Faster Response:**
One click, or automatic inputs initiate paging and relay actions instantly
- **Operational simplicity:**
One dashboard replaces multiple vendor apps and manual steps
- **Air-gapped reliability:**
Designed to run 100% locally; no cloud required
- **Audit capability:**
Every trigger and action are logged with rich context
- **Scalable control:**
Manage multiple relay boards and many inputs from one location
- **Support StaffAlerter Desktop notification application on PCs**

Utilization:

- Supports NOAA weather monitoring (requires internet)
- Manufacturing
- Building system control
- Education
- Healthcare
- Retail
- Public Sector
- Safety notifications
- Door and gate access
- Audio and video alerting

Message Control Server with System Activation Relay

Mini-Alert Input Control Up to 4 Activation Inputs Per Mini Alert

PropStop, AirAlerter and PB-1 Inputs for Alerting and Notifications

Integration with Existing Paging Using Multicast

270/360 degree Strobe With 2 Emergency Lights Dual Color for Dual Alerting

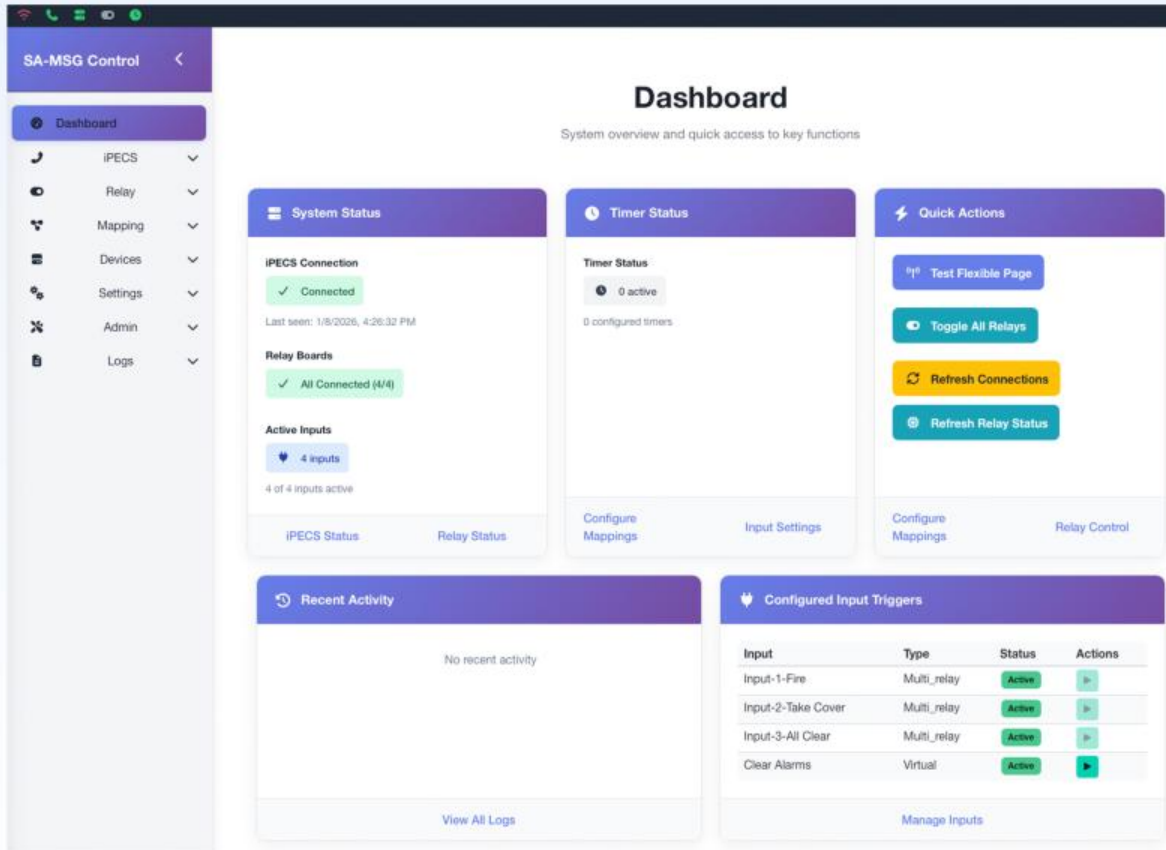

Integrates with Existing Phone Systems

Display Wall Board Single and Dual Line Display in Multiple Colors and Languages

SA-MSG Control Server Dashboard

The dashboard provides a real time overview of the SA-MSG Control Server status of message board operation

- Relay board status
- Built-in Message Storage
- Unit connection
- Number of active inputs
- Store and Forward
- Paging Function

- Recent Activity
- Programmed Quick Action Buttons
- Configured Input Triggers
- Record Messages

Consider Staffalerter to Consolidate Existing Safety Systems and Provide Enhanced Monitoring, Alerting and Notification

StaffAlerter provides the most robust solution:

- Ease of Deployment
- Low Acquisition Cost
- Low Ongoing Costs
- No impact to existing infrastructure
- Ease of Maintenance
- Integrates with iPECS and hosted telephone systems
- Wide range of features and flexibility
- Unlimited sensors and alerting devices supported
- Ease of programming and provisioning
- Ease of Expansion
- Ease of Integration with existing systems

StaffAlerter is the right solution for monitoring industrial security and safety

Call today for a demonstration of StaffAlerter capabilities. We can design a system that's right for your industrial facility based on best practices.
